

VisitUp

VisitUp is a software to obtain a better positioning in the search engines.

Generate visits to our links, of different types, direct, social and organic, also from different platforms, PC, mobile phone and tablets.

We can include international traffic, increasing the value of proxies.

After a daily use of approximately 3 hours, we will obtain a notable increase in positioning in just 10 days of use.

VisitUp

Edit and insert our links

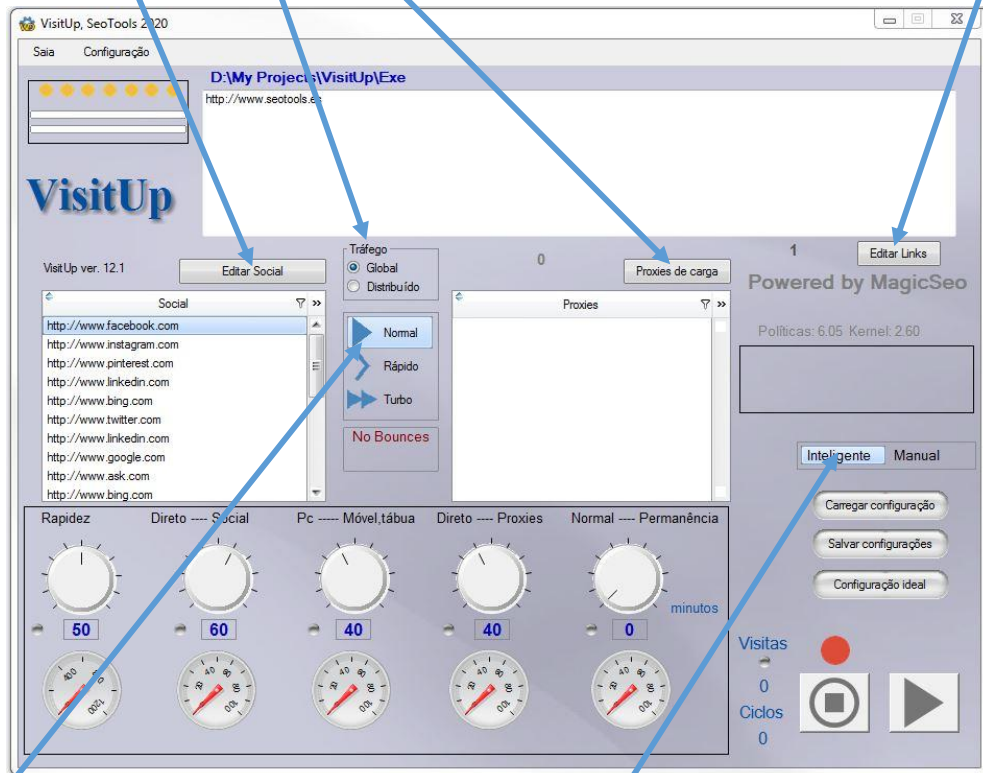

To modify the different type of social traffic

To obtain traffic only from the same country or from all.

Distributed = only same country

Global = of all countries

download proxies from
the internet

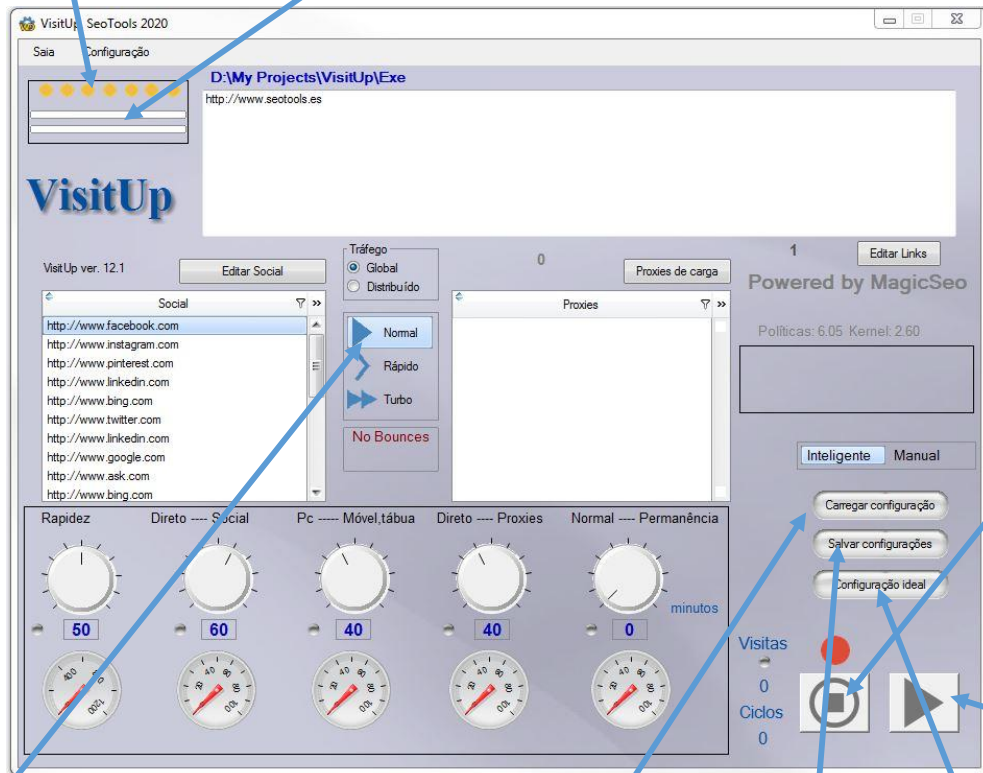

number of
simultaneous
processes and
speed of visits

The intelligent mode, slows down at night and increases again during working hours, it also adjusts to the number of links we have. It is recommended to put the manual mode at the beginning, until we position our WEB pages, then we must put it in intelligent mode so that the search engines do not detect the system.

VisitUp

Simultaneous processes

Remaining time to restart the software

number of simultaneous processes and speed of visits

Load a previously saved configuration

Save the default configuration or give it a name for optional configuration.

Load optimal configuration

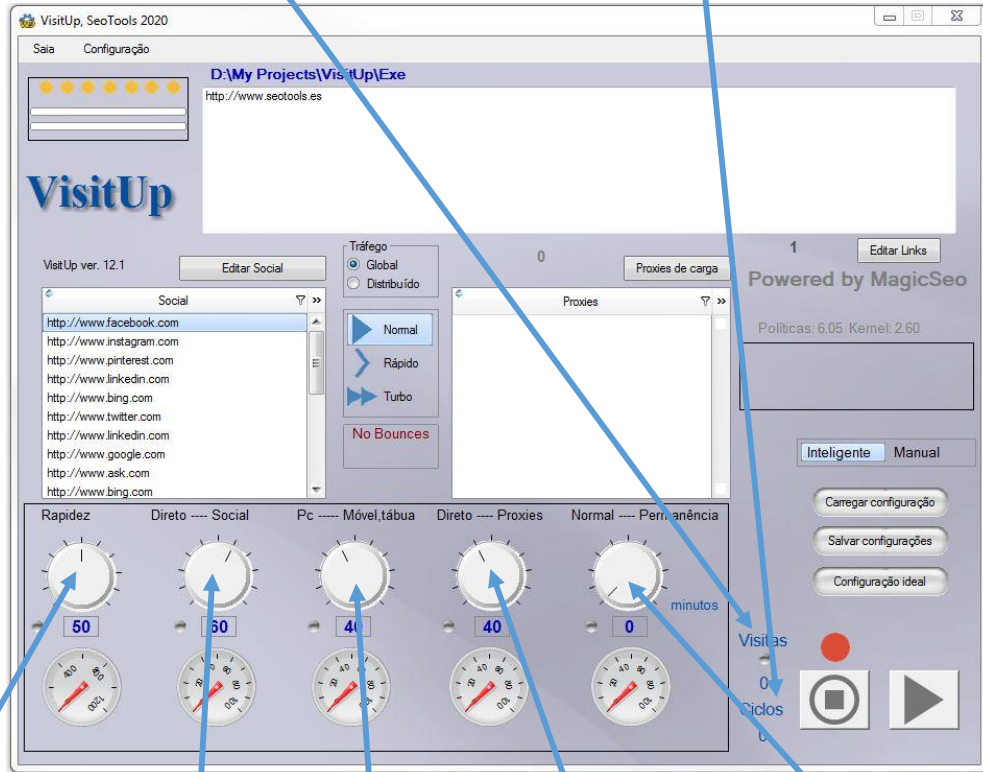

Stop traffic

Start traffic

VisitUp

Real counter of visits made to our links

Counter of finished cycles to all our links

Speed of each process, the higher the speed, the greater number of visits

On the left to get direct traffic and on the right to get traffic from different social networks.

On the left to get traffic from PCs and on the right to get traffic from mobile phones and tablets

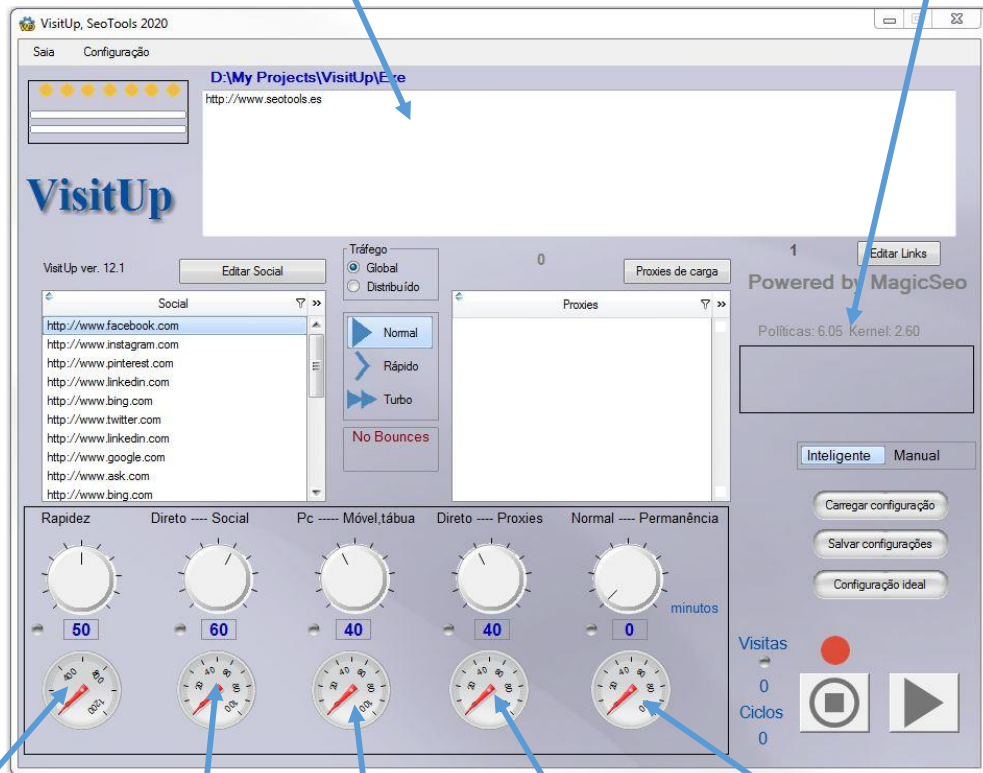

On the left for traffic from your same city and on the right for traffic from different locations and countries

To get a long stay on each link, reduce the number of visits, but also the bounces. ONLY ACTIVE IF IN CONFIGURATION, WE HAVE THE OPTION TO DOWNLOAD REBOUNDS

VisitUp

View our WEB links

Updated search engine policies

Displays the number of visits per hour

View the percentage of direct and social traffic

Displays the percentage of PC traffic and others

View the percentage of direct or international traffic

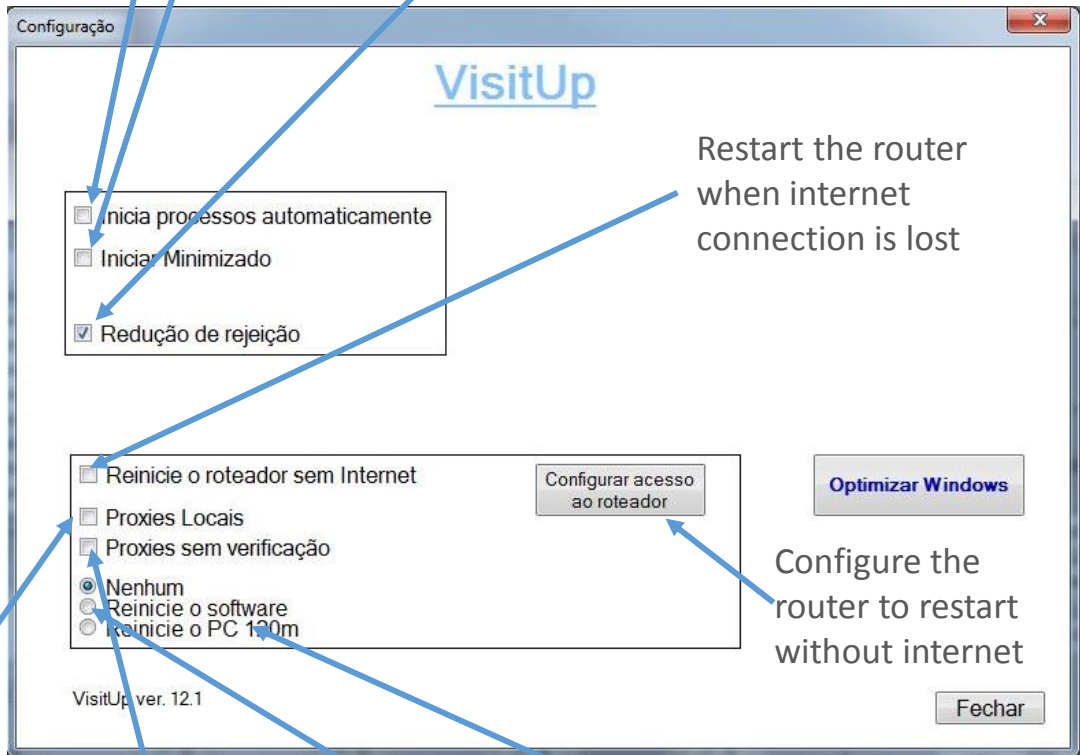

View the residence times on each website

VisitUp

Automatically starts traffic when program starts

Minimize the program at startup

Reduce bounces in Google Analytics

Restart the router when internet connection is lost

Configure the router to restart without internet

It does not download Proxies from the Internet, if we want to use our own proxies

Does not check proxies, not recommended

Restart the application every 90 minutes, recommended

Restart the PC every 2 hours

VisitUp

The program loads the new search engine policies, then downloads the current list of proxies. Initialize the simultaneous processes and wait for us to press the start button.

The positioning time is 10 days from the beginning of the use of the application. The maximum possible number of hours of program operation is recommended.

links format:

<http://www.seotools.es> – SPAIN

After the link, we must include a space, a hyphen and another space, then the country, always in capital letters

To include proxies, we must include the file "proxies.txt", with the proxy number followed by the colon ":" and the proxy port.

It is recommended to group all console windows "dos" of the taskbar into one.

It is also recommended to assign all the permissions to the program folders.
